

Reserves and Resources

As of December 31, 2014

Cautionary Statement regarding Reserves and Resources:

The “reserves” disclosed in this following table have been prepared in compliance with Industry Guide 7 published by the SEC. As used herein, the term “reserve” means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserve determination. The term “economically,” as used in this definition, means that profitable extraction or production has been established or analytically demonstrated in a feasibility study to be viable and justifiable under reasonable investment and market assumptions. The term “legally,” as used in this definition, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Newmont must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Newmont’s current mine plans. Reserves in this document are aggregated from the Proven and Probable classes.

Proven and Probable reserves are based on extensive drilling, sampling, mine modeling and metallurgical testing from which we determine economic feasibility. Metal price assumptions follow SEC guidance not to exceed a three year trailing average. The price sensitivity of reserves depends upon several factors including grade, metallurgical recovery, operating cost, waste-to-ore ratio and ore type. Metallurgical recovery rates vary depending on the metallurgical properties of each deposit and the production process used. The reserve tables included in this release list the average metallurgical recovery rate for each deposit, which takes into account the assumed processing methods. The cut-off grade, or lowest grade of mineralized material considered economic to process, varies with material type, price, metallurgical recoveries, operating costs and co- or by-product credits. The Proven and Probable reserve figures presented herein are estimates based on information available at the time of calculation. No assurance can be given that the indicated levels of recovery of gold and copper will be realized. Ounces of gold and silver or pounds of copper included in the proven and probable reserves are those contained prior to losses during metallurgical treatment. Reserve estimates may require revision based on actual production. Market fluctuations in the price of gold or copper, as well as increased production costs or reduced metallurgical recovery rates, could render certain proven and probable reserves containing relatively lower grades of mineralization uneconomic to exploit and might result in a reduction of reserves.

The terms “resources” and “Measured, Indicated and Inferred resources” are used herein. The Measured, Indicated, and Inferred resource figures presented herein are estimates based on information available at the time of calculation and are exclusive of reserves. A “Mineral Resource” is a concentration or occurrence of solid material of economic interest in or on the Earth’s crust in such form, grade, or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. Mineral Resources are sub-divided, in order of increasing geological confidence, into Inferred, Indicated and Measured categories. Ounces of gold and silver or pounds of copper included in the Measured, Indicated and Inferred resources are those contained prior to losses during metallurgical treatment. Market fluctuations in the price of gold and copper, as well as increased production costs or reduced metallurgical recovery rates, could change future estimates of resources. Please refer to the reserves and resource note on at the end of the document.

Investors are advised that the SEC does not recognize the terms “resources” and “Measured, Indicated and Inferred resources”. Newmont has determined that such “resources” would be substantively the same as those prepared using the Guidelines established by the Society of Mining, Metallurgy and Exploration (SME) and defined as “Mineral Resource”. Estimates of resources are subject to further exploration and

development, are subject to additional risks, and no assurance can be given that they will eventually convert to future reserves. Inferred Resources, in particular, have a great amount of uncertainty as to their existence and their economic and legal feasibility. Investors are cautioned not to assume that any part or all of the Inferred Resource exists, or is economically or legally mineable. Also, disclosure of contained ounces is permitted under the SME Guideline and other regulatory guidelines, such as Canada's NI 43-101 and Australia's JORC. However, the SEC generally requires mineral resource information in SEC-filed documents to be reported only as in-place tonnage and grade. Investors are reminded that even if significant mineralization is discovered and converted to reserves, during the time necessary to ultimately move such mineralization to production the economic feasibility of production may change. See the Company's Annual Report for the "Proven and Probable Reserve" and "Mineralized Material" tables prepared in compliance with the SEC's Industry Guide 7, available at <http://www.newmont.com/our-investors/financial-reporting/sec-filings> and on www.sec.gov.

Investors are reminded that the tables presented in the Annual Report are estimates as of December 31, 2014. We publish reserves and resources annually, and will recalculate reserves and resources at year-end 2015, taking into account metal prices, changes, if any, in future production and capital costs, mine designs, model changes, divestments and depletion as well as any acquisitions and additions during 2015.

The following tables detail gold proven and probable reserves reflecting only those reserves attributable to Newmont's ownership or economic interest at December 31, 2014, and 2013:

- (1) 2014 reserves are calculated at a gold price of \$1,300, A\$1,415 or NZ\$1,735 per ounce unless otherwise noted. 2013 reserves were calculated at a gold price of \$1,300, A\$1,415 or NZ\$1,675 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000 unless they are less than 50,000.
- (2) Midas sold to Klondex Mines on February 11, 2014. Jundee sold to Northern Star Resources on July 1, 2014. Stake in La Herradura sold to Fresnillo plc on October 7, 2014. Values in the table above are as of December 31, 2014.
- (3) Project is currently undeveloped.
- (4) Reserve estimates provided by Barrick, the operator of the Turquoise Ridge Joint Venture.
- (5) In-process material is the material on leach pads at the end of the year from which gold remains to be recovered.
- (6) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans.
- (7) Reserve estimates were provided by Buenaventura, the operator of the La Zanja project.
- (8) Project is under construction, percentage reflects Newmont's interest as of December 31, 2014. Newmont's ownership as of December 31, 2013 was 80%.
- (9) Reserve estimates provided by Regis Resources Ltd., in which Newmont holds a 19.45% interest.
- (10) Percentage reflects Newmont's economic interest as of December 31, 2014.

- (11) Includes undeveloped reserves at 7 pits totaling 3.2 million ounces.
(12) Project reached commercial production in November 2013.

- (1) Resources are reported exclusive of reserves.
- (2) Resources are calculated at a gold price of \$1,400, A\$1,475 or NZ\$1,795 per ounce unless otherwise noted. 2013 Resources were calculated at a gold price of \$1,400, A\$1,475 or NZ\$1,700 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000, and ounces have been rounded to the nearest 10,000.
- (3) Project is currently undeveloped.
- (4) Measured and Indicated Resources (combined) are equivalent to Mineralized Material disclosed in Newmont's 10-K filing.
- (5) Resource estimates provided by Barrick, the operator of the Turquoise Ridge Joint Venture.
- (6) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills.
- (7) Resource estimates provided by Buenaventura, the operator of the La Zanja project.
- (8) Resource estimates provided by Regis Resources Ltd., in which Newmont holds a 19.45% interest.
- (9) Percentage reflects Newmont's economic interest as of December 31, 2014.

(1) Reserves are calculated at a price of \$3.00 or A\$3.25 per pound copper price unless otherwise noted. 2013 Reserves were calculated at \$3.00 or A\$3.25 per pound copper price unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000, and pounds have been rounded to the nearest 10 million.

(2) Project is undeveloped.

(3) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material.

(4) Stockpiles increase or decrease depending on current mine plans.

(4) Percentage reflects Newmont's economic interest as of December 31, 2014.

(1) Resources are reported exclusive of reserves.

(2) Resources are calculated at a copper price of \$3.50 or A\$3.70 per pound unless otherwise noted. 2013 Resources were calculated at a copper price of \$3.50 or A\$3.70 per pound unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000, and pounds have been rounded to the nearest 10 million, with the exception of Phoenix, Nevada.

(3) Measured and Indicated Resources (combined) are equivalent to Mineralized Material disclosed in Newmont's Form 10-K filing.

(4) Percentage reflects Newmont's economic interest as of December 31, 2014.

(5) Project is undeveloped.

- (1) Resources are reported exclusive of reserves.
- (2) Resources are calculated at a silver price of \$25.00 per ounce unless otherwise noted. 2013 Resources were calculated at a silver price of \$25.00 per ounce unless otherwise noted. Tonnage amounts have been rounded to the nearest 100,000.
- (3) Measured and Indicated Resources (combined) are equivalent to Mineralized Material disclosed in Newmont's Form 10-K filing.
- (4) Stockpiles are comprised primarily of material that has been set aside to allow processing of higher grade material in the mills. Stockpiles increase or decrease depending on current mine plans.
- (5) Percentage reflects Newmont's economic interest as of December 31, 2014.
- (6) Project is undeveloped.
